

Answer **all** the questions.

- 1 A grain of salt weighs 6.48×10^{-5} kg on average.
A packet contains 0.35 kg of salt.

(a) Use this information to calculate the number of grains of salt in the packet.

$$0.35 \div (6.48 \times 10^{-5})$$

✓

[ms also allows 5400/5402] (a) 5401 ✓ [2]

- (b) Explain why your answer to part (a) is unlikely to be the actual number of grains of salt in the packet.

Average weightt given so actual weights
likely to differ. ✓

..... [1]

2 Tom researches the weights of plant seeds.

- One poppy seed weighs 3×10^{-4} grams.
- 250 pumpkin seeds weigh 21 grams.
- One sesame seed weighs 3.64×10^{-6} kilograms. $\times 1000$

Write the three types of seed in order according to the weight of one seed.

Write the lightest type of seed first.

You must show how you decide.

$$P_o = 0.0003g$$

✓

$$P_v = 21 \div 250 = 0.084g$$

✓

$$S = 0.00364g$$

✓

poppy sesame pumpkin [4]

4 Sophie is organising a raffle.

- Each raffle ticket costs 50p.
- She sells 400 tickets.
- The probability that a ticket, chosen at random, wins a prize is 0.1.
- Each winning ticket receives a prize worth £3.

Sophie says

I expect the raffle to make over £100 profit.

Show that Sophie is wrong.

$$400 \times 50p = \pounds 200 \quad \checkmark$$

$$\text{Win} = 0.1 \times 400 \times 3 = \pounds 120 \quad \checkmark \checkmark$$

$$\text{Expected profit} = \pounds 80 \quad \checkmark$$

- 7 Construct the perpendicular from the point P to the line AB.
Show all of your construction lines.

[2]

- 8 The graph shows two parallel lines, Line A and Line B.

Line A has equation $y = 6x + 7$.
Line B passes through the point $(4, 26)$.

Find the equation of Line B.

$$y = mx + c$$

$$26 = 6 \times 4 + c$$

$$c = 2$$

$$y = 6x + 2$$

[4]

- 9 Martha's solution to the inequality $8x + 5 \leq 3x - 10$ is shown on the number line.

Is her solution correct?
Explain your reasoning.

$$5x \leq -15$$

$$x \leq -3$$

(a) 6 39 pm ✓ OE [4]

- (b) Calculate the distance that was between aircraft A and aircraft B at 3pm.

$$x^2 = 3250^2 + 4960^2 - 2 \times 3250 \times 4960 \cos 42$$

$$x = \sqrt{11205110.83}$$

(b) 3347.4 km [4]

[ms 3345 → 3350]

- 18 A cone has radius r cm and height h cm.

The height is three times the radius.
The volume of the cone is 2100 cm^3 .

Calculate the radius of the cone.

[The volume V of a cone with radius r and height h is $V = \frac{1}{3}\pi r^2 h$.]

$$V = \frac{1}{3} \times \pi \times r^2 \times (3r) = 2100 \quad \checkmark$$

$$\pi r^3 = 2100 \quad \checkmark$$

$$r = \sqrt[3]{\frac{2100}{\pi}} \quad \checkmark$$

$$8.74 \quad \checkmark$$

..... cm [4]

19 The point $(-5, 2)$ lies on the circumference of a circle, centre $(0, 0)$.

(a) Find the equation of the circle.

$$r = \sqrt{5^2 + 2^2} = \sqrt{29} \quad \checkmark \checkmark$$

(a) $x^2 + y^2 = 29$ [4] ✓ ✓

(b) Work out the gradient of the tangent to the circle at $(-5, 2)$.

$$m_{\text{radius}} = -\frac{2}{5} \quad \checkmark$$

(b) $\frac{5}{2}$ [2] ✓

- 20 (a) Show that the equation $x^4 - x^2 - 9 = 0$ has a solution between $x = 1$ and $x = 2$.

[3]

$$f(1) = 1 - 1 - 9 = -9$$

$$f(2) = 16 - 4 - 9 = 3$$

sign change hence $1 < x < 2$

- (b) Find this solution correct to 1 decimal place.
Show your working.

$$f(1.5) = -6.1875$$

$$f(1.8) = -1.7424$$

$$f(1.9) = 0.4221$$

$$f(1.85) = -0.70899$$

so

$$1.85 < x < 1.9$$

1.9

- (b) $x = \dots\dots\dots$ [4]

- 21 Toy building bricks are available in two sizes, small and large. The small and large bricks are mathematically similar.

A small brick has volume 8 cm^3 and width 2.1 cm .

A large brick has volume 15.625 cm^3 .

Calculate the width of a large brick.

$$VSF = \frac{15.625}{8} = \frac{125}{64} \quad \checkmark$$

$$LSF = \sqrt[3]{\frac{125}{64}} = \frac{5}{4} \quad \checkmark$$

$$2.1 \times \frac{5}{4} \quad \checkmark$$

$$= 2.625 \quad \checkmark$$

..... cm [4]

Turn over for question 22

- 22 At the start of 2018, the population of a town was 17 150.
At the start of 2019, the population of the town was 16 807.

It is assumed that the population of the town is given by the formula

$$P = ar^t$$

where P is the population of the town t years after the start of 2018.

- (a) Write down the value of a .

(a) [1]

17150 ✓

- (b) Show that $r = 0.98$.

[1]

$$\frac{16807}{17150} = 0.98 \quad \checkmark$$

- (c) Show that the population is predicted to be less than 16 000 at the start of 2022. [2]

$$17150 \times 0.98^4 = 15818.6... \quad \checkmark$$

- (d) Use the formula to work out what the population might have been at the start of 2017.

$$17150 \div 0.98 \quad \checkmark$$

17500 ✓

(d) [2]
