Paper 3 (Calculator)

Higher Tier

Wednesday 8 November 2017 – Morning

Time: 1 hour 30 minutes

Paper Reference

1MA1/3H

You must have: Ruler graduated in centimetres and millimetres, protractor, pair of compasses, pen, HB pencil, eraser, calculator. Tracing paper may be used.

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You must **show all your working**.
- Diagrams are **NOT** accurately drawn, unless otherwise indicated.
- **Calculators may be used.**
- If your calculator does not have a π button, take the value of π to be 3.142 unless the question instructs otherwise.

Information

- The total mark for this paper is 80
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

- 2 In London, 1 litre of petrol costs 108.9p
In New York, 1 US gallon of petrol costs \$2.83

1 US gallon = 3.785 litres
£1 = \$1.46

In which city is petrol better value for money, London or New York?
You must show your working.

(NY) $3.785 \text{ l} = \$2.83$
 $1 \text{ litre} = \underline{\$0.74768...}$ $\div 3.785$

(L) $1 \text{ litre} = \cancel{\pounds}1.089$

The value, £ V , of Jack's boat at the end of n years is given by the formula

$$V = 12\,500 \times (0.85)^n$$

- (a) At the end of how many years was the value of Jack's boat first less than 50% of the value of the boat when it was new?

$$6250 = 12500 \times 0.85^n$$

$$0.5 = 0.85^n$$

$$\text{Petrol consumption} = \frac{100 \times \text{Number of litres of petrol used}}{\text{Number of kilometres travelled}}$$

Nathan's car travelled 148 kilometres, correct to 3 significant figures.
The car used 11.8 litres of petrol, correct to 3 significant figures.

Nathan says,

"My car used less than 8 litres of petrol per 100 kilometres."

Could Nathan be wrong?

A , B and C are points on the circumference of a circle, centre O .
 AOB is a diameter of the circle.

Prove that angle ACB is 90°

You must **not** use any circle theorems in your proof.

$OA = OC = OB$ as all are radii

Let $\angle AOC = x$

so $\angle OAC$ and $\angle OCA = \frac{180 - x}{2} = 90 - \frac{x}{2}$

(base angles of isosceles Δ are equal)

$\angle COB = 180 - x$ (straight line = 180)

so $\angle OBC$ and $\angle OCB = \frac{180 - (180 - x)}{2}$

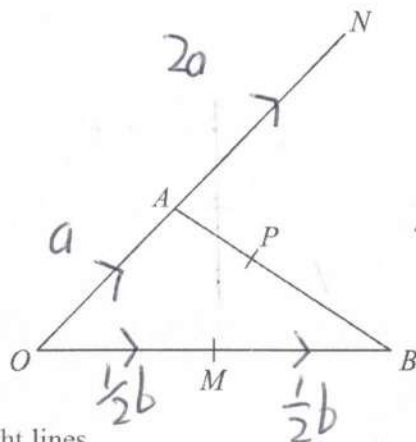

$= \frac{x}{2}$ (base angles)

$\angle OCA + \angle OCB$

$$= \frac{180 - x}{2} + \frac{x}{2} = 90 - \frac{x}{2} + \frac{x}{2} = \underline{\underline{90}}$$
